Dear Parents:

Our Dental Health Education Grant has been written and once again approved. This means that the Fluoride Varnish program for grades K through 6 has been funded. With your permission your child can get a free Fluoride Varnish treatment at school.

What is Fluoride Varnish?
Fluoride Varnish is a protective coating that is painted on teeth to help prevent new cavities and to help stop cavities that are already started.

Why do we recommend putting fluoride varnish on children’s teeth?
Tooth decay is one of the most common preventable diseases seen in children. Cavities in teeth can cause pain and affect children’s ability to eat, speak, sleep, and learn properly. Children do not lose all their baby teeth until they are 12 to 13 years old.

Is Fluoride Varnish safe?
Yes, Fluoride Varnish can be used on babies from the time they get their first teeth. Only a small amount of Fluoride Varnish is used. This method has been used in Europe for more than 30 years. Fluoride Varnish is approved by the Food and Drug Administration (FDA) and is endorsed by the American Dental Association.

How is it put on the teeth?
The Fluoride Varnish is applied to the teeth, by a health professional, using a small disposable brush. It is quick and easy to apply and does not have a bad taste. There is no pain when applying the Fluoride Varnish. Your child will be able to eat right after this treatment.

How long does the Fluoride Varnish last?
The effects of Fluoride Varnish will last up to several months. The Fluoride Varnish will be applied to your child’s teeth 2x a year.
